

The latest 3D STEP (.stp) files of the **aquatherm green pipe**, **aquatherm blue pipe**, **aquatherm lilac pipe** and most of the **aquatherm fittings** are now available!

## What is a STEP file?

STEP (.stp) file is a **CAD** (Computer-Aided Design) file format, usually used to share **3D models** between users with different CAD systems.

CAD file interchangeability has been a huge headache in the past, so it had to be made uniform. **Standard ISO 10303** is trying to solve this problem.

INTERNATIONAL  
STANDARD

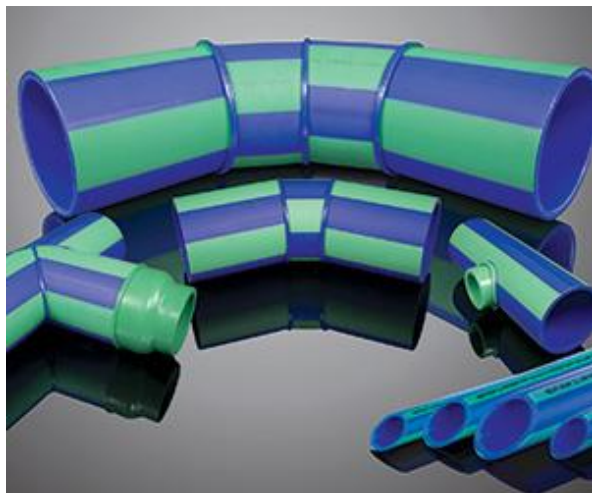

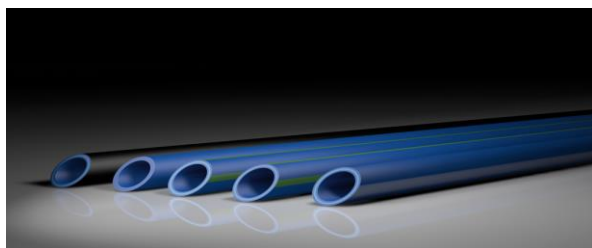

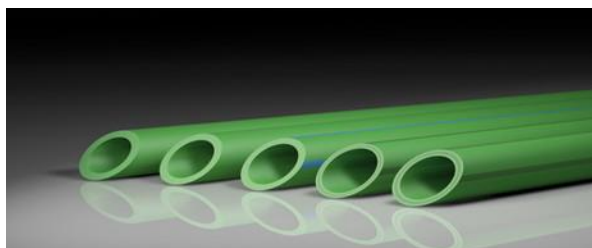

ISO  
10303

This standard is informally known as “**STEP**”, which stands for “**Standard for the Exchange of Product model data**”.

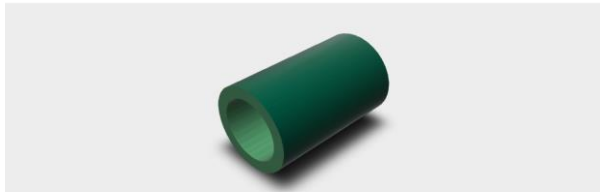

STEP-file (ISO 10303-21) is an implementation method that can represent 3D objects in CAD and related information, such as model-based 3D Engineering.

STEP/STP export/import options are already supported by a growing amount of 3D CAD software.  
Please consult your software supplier to find out if your CAD software already supports STEP files.
