

# BETTER BREWING SYSTEMS

A BETTER PIPING SYSTEM FOR BETTER BREWS. THAT'S **aquatherm**

Your passion is crafting the perfect brew.

Ours is making the perfect piping system.

### CRAFT PIPE FOR CRAFT BREWING

New and innovative developments are transforming the brewing industry every day, and Aquatherm pipe is one of the most exciting.

Aquatherm's PP-R has been carefully developed and refined over the last four decades to create the perfect pipe for your operation. Most piping manufacturers rely on outdated methods and materials just because it's familiar or cheaper, but not us.

At Aquatherm, we believe in doing things differently, just like you.

### NOT JUST AN ALTERNATIVE

Aquatherm pipes are made from polypropylene (PP-R), a chemically inert thermoplastic that provides many benefits over other materials. So rather than just being an alternative, Aquatherm pipe is a serious upgrade while being quite competitive cost-wise.

Aquatherm pipe is completely inert and does not react with water or glycol, so it will never corrode in cooling systems. And it does not become brittle over time or fail when exposed to extreme temperatures.

### FUTURE-PROOF SYSTEMS

Traditional piping materials use either foreign substances (glue, solder) or mechanical connections (gaskets, threads) to hold a system together, and these connections eventually fail.

Aquatherm pipes use heat fusion, a fast, reliable process that makes seamless, leak-free connections.

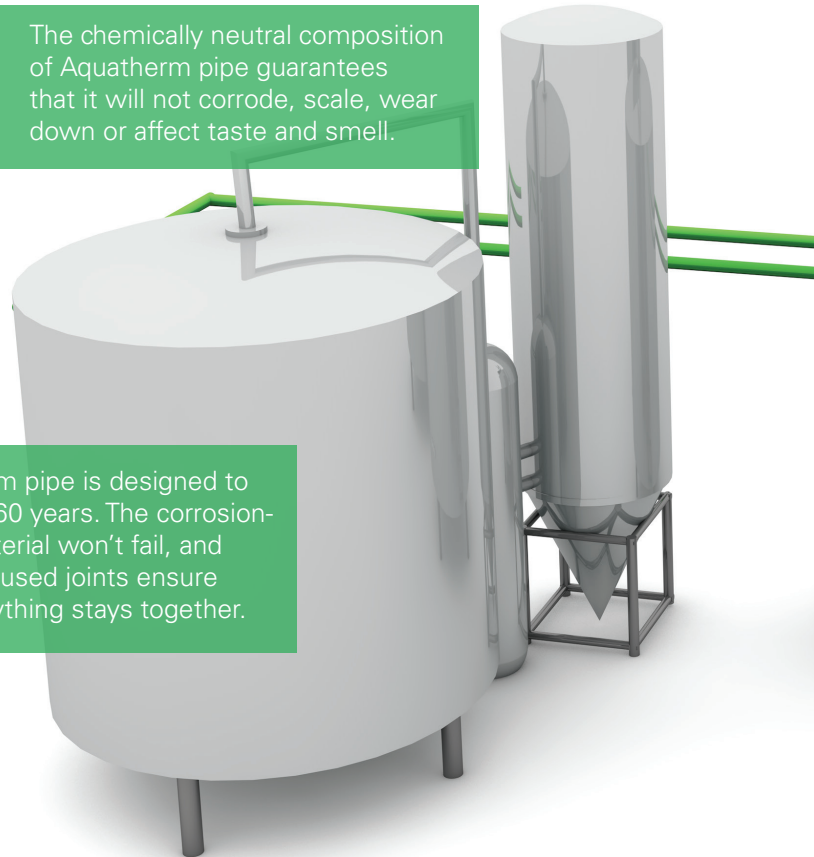

"We have experienced zero leaks. Not even a little leak... Our next project will be 10 times the size of what we have now. We plan on using Aquatherm again when we expand."

Nathan Cowan, CEO,  
Eventide Brewing, Atlanta, GA

The chemically neutral composition of Aquatherm pipe guarantees that it will not corrode, scale, wear down or affect taste and smell.

Aquatherm pipe is designed to last over 60 years. The corrosion-proof material won't fail, and the heat-fused joints ensure that everything stays together.

To form a connection, the material is melted, joined together, then allowed to cool. The materials become one, as if they came from our factory that way, so leaks and failures are a thing of the past.

To accommodate system expansion, Aquatherm has fusion outlets that can be added by drilling into the pipe and heat-fusing a fitting directly into the pipe wall.

### UNIFORMITY AND PROTECTION

Aquatherm can be used in most of your systems, giving you greater uniformity throughout the building. Try Aquatherm for potable water, compressed air, heating, cooling, and more. And to show you how serious we are about our pipe, we back it with a 10-year manufacturer's warranty that covers replacement, personal injury, and even lost profits, up to roughly \$20 million per incident.

"When it came down to making a decision on the material for our glycol plumbing, it really didn't make sense after all we had put into the business, to go with an inferior product just to save a few dollars. Investing in quality equipment that I know I can rely on and expand on easily was the only logical thing to do."

Michael Payne, Co-owner,  
Aardwolf Brewery, Jacksonville, FL

"Moving forward, we have air process, CO<sub>2</sub> process, and more water lines that we're going to run with the Aquatherm pipe... the possibilities are endless."

Dan Peron, Director of Brewery Operations,  
Arbor Brewing Company Microbrewery, Ypsilanti, MI

## BREWERIES CURRENTLY USING AQUATHERM PIPES

Epic Brewing Company, Salt Lake City, UT

Aardwolf Brewery, Jacksonville, FL

Eventide Brewing, Atlanta, GA

Main Street Brewing Company, Vancouver, BC

Two Henrys Brewing Company, Plant City, FL

Veteran's United Craft Brewery, Jacksonville, FL

Founders Brewing Company, Grand Rapids, MI

Big Sky Brewing, Missoula, MT

Two Brothers Brewing Company, Warrenville, IL

Arbor Brewing Company Microbrewery, Ypsilanti, MI

Henniker Brewing Company, LLC, Henniker, NH

Ipswich Ale Brewery, Ipswich, MA

500 S 500 W | London, Utah | 84042 | Phone: 801-805-6657 | Fax: 403-770-8326
