

push-fit connection

The aquatherm black system in suspended ceilings comes with pushfit-connectors for a fast and secure link. aquatherm black system has serial 16 mm connections, on which the pushfit-connection is inserted to the stop.

The holding element/ring inside, equipped with stainless steel teeth, keeps the connection firmly in the link. The two integrated o-rings guarantee a completely sealed and secure connection.

To allow maintenance within the ceiling void, the pushfit connections are demountable. It is important to ensure, that the system is unpressurized before attempting to demount the connection. Then simply press the hold element (white ring) against the connector and disconnect. The connection is then reusable.
