

Give your system longevity with **Climatherm** piping

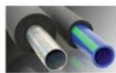

The German made aquatherm **Climatherm** PP-R pipe system has been developed especially for HVAC applications, i.e. chilled and heating water and secondary refrigeration (water/glycol or brines).

In addition to the general advantages of the maintenance free PP-R pipe system **Climatherm** has a range of dimensions from Ø20 to Ø630 mm.

Advantages of the Climatherm pipe system:

- Corrosion resistant
- Resistant against chemicals
- Low Thermal Conductivity (less insulation)
- Less pipe roughness (less friction head loss)
- Recyclable
- Light in weight
- Very good sound insulating characteristics
- *Faser* pipe Technology

- Easy processing (free onsite training of installer)
- Weld in saddle technique
- Pipes in 4m (5.8 from Ø160mm) length
- High heat stabilized
- Weldable flange adapters for flange connections
- Transition pieces from PP-R to metal (DR brass or stainless steel)
- Used for 40 years around the world in 78 countries!

21st Century pipe Innovation with Aquatherm. Are you ready for it?
